

Detailed Study of the Frog

Experiment 11 - Practical Notes

Name: _____ Roll no.: _____ Date: _____

Aim

To identify frog anatomy and compare major systems

Principle

A frog provides a comparative vertebrate model. External and internal structures should be identified on labelled models or prepared teaching diagrams.

Requirements

- Instructor-provided labelled diagrams, traces or data for this activity.
- Calculator, graph paper or spreadsheet, and the activity record.

Procedure

1. Prepare

Identify the supplied material, teaching objective and observation format.

2. Observe

Use a labelled model or virtual anatomy session; trace digestive, circulatory, respiratory, urinary and reproductive structures without performing a dissection.

3. Record and explain

Draw or tabulate the observed features. Explain a conclusion supported by those observations and one limitation.

Remedial Biology

Observations and Record

Record item	Entry
Activity / material identifier	_____
Measurement or visible feature	_____
Comparison / calculated outcome	_____
Interpretation and limitation	_____

Result

The recorded finding is ____; the supporting observation or calculation is _____. The main limitation is _____.

Precautions

- Use the supplied teaching material; distinguish a measured observation from an assumed value.
- Keep units, axes, labels and measurement conditions consistent.
- Record limitations and seek instructor review before applying a conclusion to a live case.

Viva Questions and Answers**1. What is the main endpoint?**

Identify frog anatomy and compare major systems

2. Does one observed result prove a general conclusion?

No. Controls, repeatability and the limitations of the method must be considered.
