

Clinical Intervention and Outcome Log

Experiment 7 - Practical Notes

Name: _____ Roll no.: _____ Date: _____

Aim

To record a specific pharmacy intervention and evaluate its outcome.

Principle

A clear intervention record identifies the issue, rationale, communication, decision and subsequent result.

Requirements

- Allocated clinical notes or fictional case, current approved medicine information and local clinical policy.
- Case-record form, calculator where needed and supervising pharmacist.

Procedure

1. Prepare the case

Use the allocated clinical record or a fictional teaching case. Record a case code, setting and date; exclude names and personal identifiers.

2. Assess the required information

Confirm specific medicine-related problem; evidence and urgency; responsible clinical team. Note missing information explicitly.

3. Develop the pharmacy assessment

Use a problem-recommendation-response-outcome format. Record whether the team accepted, modified or declined the proposal and why, where known. Follow the agreed endpoint and distinguish implementation from a demonstrated clinical outcome.

4. Discuss and document

Present the assessment to the supervising pharmacist or treating team. Record the accepted action, responsible person and intended follow-up.

5. Evaluate the outcome

Review the agreed clinical or process endpoint. Record what changed, what remained unresolved and the next step.

Internship and Residency

Observations and Record

Record component	Student entry
Date / case / problem	_____
Proposed action / rationale	_____
Team response	_____
Implementation status	_____
Observed outcome / follow-up	_____

Result

Assessment: _____. Proposed action: _____. Supervisor decision: _____. Follow-up outcome: _____.

Precautions

- Use the treating team and current patient-specific information for all actual medicine decisions.
- Maintain confidentiality and confirm allergy, medicine and timing information.
- Do not invent patient observations, acceptance of an intervention or follow-up outcomes.

Viva Questions and Answers

1. Why collect patient-specific information?

Medicine decisions depend on the individual indication, risks, current treatment and monitoring needs.

2. What makes a pharmacy intervention useful?

A specific identified problem, a justified action, a clear communication route and a documented outcome.
